ACADEMIC PROJECTS

Smart Glasses for Blind People with Object Detection & Footboard Prevention System

These advanced smart glasses utilize embedded cameras and ultrasonic/proximity sensors to detect real-time objects such as walls, furniture, and moving obstacles. Designed to assist visually impaired individuals, the system provides immediate audio and tactile vibration alerts to navigate safely and seamlessly.

Features integrated GPS navigation and hands-free voice control interfaces for streamlined operation. Engineered to be lightweight, ergonomic, and water-resistant for daily use, featuring Bluetooth connectivity for smartphone synchronization, long-lasting battery capacity, and emergency contact alert workflows to optimize user autonomy and outdoor safety.
